[redacted]

FEDERAL BUREAU OF INVESTIGATION

Date of entry [redacted]2026

[redacted] On or about [redacted]/2026, FBI [redacted] received from [redacted] Special Agent [redacted] a written statement co-signed by [redacted] Special Agent [redacted] The statement will be attached to this FD-302 and is provided verbatim below for ease of reading:

"Unidentified Aerial Object Observation Report evening of [redacted]26

"On [redacted] 2026, at approximately 1923 hours, [redacted] Special Agent [redacted] stationed at [redacted] called out a detection for a thermally elevated aerial object located west of his position at an estimated bearing of 251 degrees. I, [redacted] Special Agent [redacted], and [redacted] Special Agent [redacted] stationed several miles to the west at [redacted] Based on this notification, I, accompanied by [redacted] ran from the eastern side of our observation post to the western side in an attempt to collect further data related to the detection from Observation Post 6. We initiated a visual survey of the western horizon and almost immediately observed a substantial, nonreflective, dark black triangular object most resembling a delta wing drone. We estimated the object's wingspan at approximately nine to fifteen feet, its depth at six to nine feet, and its thickness at one to two feet. I viewed the object through a handheld thermal device and noted it appeared hotter than ambient temperature with a completely consistent thermal signature across the entire airframe and no visible exhaust gases, while [redacted] tracked the object unaided for the duration of the sighting.

"We both observed the object ascend vertically over a ridge line situated approximately 3.2 miles west of our location on a heading of about 268 degrees. The object climbed to approximately 200 feet above the ridge line,

then transitioned from vertical to horizontal flight at a very significant velocity, approaching our position, then descending southeast into the [redacted] along [redacted] We lost visual contact while the object was flying along this [redacted] at an estimated range of about 1.5 miles from our position. The total duration of the sighting was approximately three seconds. Throughout the observation, neither [redacted] nor I detected any auditory output from the unmanned aerial system.

"Co-signed SA [redacted] and [redacted]
