Subject: Mail System Error - Returned Mail
THIS MESSAGE WAS UNDELIVERABLE DUE TO THE FOLLOWING REASON: A message was not delivered because a loop was found in the MailExchange (MX) record database. The destination host has an MXrecord that points to this host, but there is no account for the recipient. Here are a few possible solutions for clearing up this problem: - return the mail since the address was invalid - fix the MX records in the DNS for the host in question and then resubmit the message - add an account or alias for the recipient on this machine and then resubmit the message. If this machine should be handling all mail for the destination host, it should be added to the list of Local-Mail-Domains in the "system" configuration. Destination host: jfklancer.com The following recipients did not receive this message: <debra@jfklancer.com> Please reply to Postmaster@postoffice.exo.com if you feel this message to be in error.
