

Dr. Sherman died in an accident involving a linear particle accelerator and probably was not murdered

-accelerators were discreetly distributed to various hospitals

-a commercial model company called high voltage engineering in boston made about 10-12 accelerators for high-tech purposes.

One existed in NO in the 1960s but was not publicly known...polio vaccine developed from monkeys

in 1959 Dr. Bernice Eddy (of NIH head of bio standards lab) discovered a cancer causing virus in the polio vaccine...she was closely associated with Dr. Sherman

Ferry had a document in his apartment called "cancer causing viruse" (in book)

\* there were major problems withh the polio vaccine that nih didn't want to inform the public about and they could remedy it using the accelerator...

Dr. Ochsner was given the partical accelerator & head of the American cancer society and exposed LHO as a defector in the 8-21 debate...

\* since the book was published haslom knows the person who developed oschner's machine

- 1) no physical accomodations were made for patients
- 2) surrounded by military security

\* Haslom believes the accelerator was in the USPHS hospital building on Magazine Street

- 1) its an allied government facility
- 2)Ochner's fbi file shows he was cleared by hoover to perform "sensitive position" for the us gov'n't and the name of the agency for whom the work is done is not revealed in the file and this occured in Fall 1959.

\* in January 1993 haslom went to NO to aid with a Frontline Inv into LHO

While standing outside 4709 Magazine street was about 1/2 block down from LHO's Apartment

- 1) request documents to identify where the acclerator was
- 2) interview people involved In these projects

The Clinton Incident: LHO went to Clinton, LA and attempted to get a job at the mental hospital and LHO arrived at a voter registration drive and was the only person in line who was not black \* People

in mental hospitals associated
