Subject: Meeting with Jim David, Tuesday, 930-1045

I met with Jim David this morning and we discussed th board objectives and our tasking. I asked Jim his background and he has currently been assigned to work with the Department of Energy on Chemical and Biological Testing retrieving documents that are currently being held at the Federal Warehouses throughout the country. He really gave very little new insight on the types of support we needed from the records area. His experience is in Space Aviation and will return to the Science and Space Museum in the spring (April). He did asked me about a job and will fax his resume soon.
