

Notes for Our Ballistics Evidence Meeting - 5/8/96

Our mandate/goals:

1. Protection of artifacts
2. Documentation
3. Public release

We want:

1. to be have say in decisions with regard to evidence
2. to be present at all testing
4. independent presence with which we are satisfied at all testing
5. everything documented and made public at appropriate time

We agree:

6. with the in-stages approach to the testing
7. That the CE 567 fiber should be tested first

We think that:

8. No testing should be done at this time which changes the composition of the artifact

Other discussion:

1. Additional acoustics testing (can anything else be done, as recommended by Blakey)
2. Bronson film analysis (recommended by the HSCA)
