Reurairtel 4/12/65 in captioned matter furnishing details for the proposed MISUR installation at 902 South 8th Street, Philadelphia. The following technical details are set forth for the information of the sound-trained Agents of your office.

A review of the technical data indicates the ZAM unit will perform satisfactorily in captioned installation. Accordingly, the Western Electric 500 L/M telephone instrument, previously furnished by your office, is being altered to include the ZAM unit in the network. When the alteration has been completed and tests made under simulated line conditions similar to those described in reairtel, the telephone instrument along with other equipment for remote controlling the SPMT unit will be forwarded to Philadelphia.

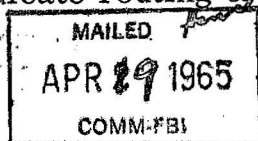

Tests suggested by your telephone company source may be conducted under controlled conditions in room 66 of the Federal Building by the source temporarily assigning a number from the same exchange as the target instrument. The requested tests should be completed within a short time and should not delay installation at the target area more than one day.

Authority to install will be handled separately.

NOTE: Target area is a known meeting place for members of captioned organization. An on-the-spot survey conducted by the Laboratory and conferences with telephone company sources indicate that the SPMT approach is the only media for effecting MISUR coverage. Special remote control SPMT equipment will be used for this installation. All switching equipment will be concealed in Bureau-assigned space in the Federal Building. Telephone company records will not indicate routing of target service through Bureau-controlled space.

J U N ELA COSA NOSTRA  
PH DIVISION  
AR - CONSPIRACYRe visit of Supervisor CHARLES K. CORBETT, of the  
Laboratory, to Phila. 4/5/65.Phone company contact has furnished a tabulation of  
resistances requested as follows:Customer to Market 7 exchange, 9th and Race Streets  
204 ohmsMA 7 exchange to Federal Building, 9th and Market Streets  
72 ohms4th floor Main Frame, Federal Building, to Room 66 in  
basement 25 ohmsSince the last two figures would require pairs both  
to and from these locations, these figures should be doubled.  
Accordingly, the total resistance would be 204 plus 144, plus  
50, equals 398 ohms.Sufficient spare pairs are available between the  
Federal Building and the MA 7 exchange so that extra pairs  
could be used to halve that resistance.Contact recalled telling SA CORBETT that customer was  
in transmission zone 1. A check revealed customer is actually  
in transmission zone 2. He noted, however, that this would  
make it more logical that the 300 series instrument be replaced  
with a 500 series.3 - Bureau
