as well as debrief him thoroughly and levy FI and MHAPRON requirements upon him.

C. In mid-November after the postponement of AMTRUNK-13's Madrid trip, preparations began to launch Operation ANTREES I in car'y Peccabor. This operation would attempt to re-organize the ratline to and from Havana and the ANTRUNK infil area for the future use of infiltrated MHAPRON recruiters and other agent assets as necessary. Secondary objectives are to bring into the infil area a cache of weapons and explosives for AMIRUNK-10/AMLASH-1 and to teach a system of S/W to one or more assets in the area. The team is to be composed of the same four individuals who participated in Operation ANTRUNK IX in October 1964: AMAGREE-1, Team Leader; AMAKA-1, Radio Operator: and AMTRUNK-16 and -20, Guides. It was decided to shelve the V-20 as the Intermediate Craft (IC) for this operation and substitute a 17' Johnson boat with twin 75 hp. outboard motors which could maneuver through shallower water and which could be more easily canouflaged. The basic reason for this decision was the fact that December through February are the low-water months in the AMTRUNK operational area. During this shallow water season, the heavier, wider V-20 can only be used in the deeper and more heavily-guarded infiltration canals.

D. Through the combined efforts of AMICE-14, the ANTRUNK P/A, and AMAGREE-1 and AMAKA-1, four radio operator candidates, to be trained for future use in PM operations, were recruited during the reporting period.

B. Recruiting for NHAPRON infiltration candidates continued during the reporting period. One prospective infiltree was recruited during the month of November and the case officer was active in assessing and debriefing two other candidates. It is hoped that by March 1965 one or more of these candidates will be trained and prepared for infiltration for clandestine MHAPHON recruiting. In large measure this will depend upon the success of Operation AMTEUNK X in re-organizing the rathine to and from Havana.

F. S/W Message No. 13 was sent to AMTRUNK-11 in response to his Message No. 15 in which he stated that both OWVL receivers were now in his possession. WAVE Message No. 13 to AMTRUNK-11 gave directions for the disposition of the OWVL receivers and the activation of OWVL contact with both AMTRUNK-11 and AMTRUNK-10.
