1. The first of these is the fact that the majority of the population of the United States is now living in the urban centers. This is a result of the industrial revolution and the consequent migration of people from the rural areas to the cities. The second factor is the fact that the majority of the population is now living in the middle class. This is a result of the economic growth of the United States and the consequent rise in the standard of living. The third factor is the fact that the majority of the population is now living in the white race. This is a result of the historical and cultural factors that have shaped the United States.
