Room 2nd Floor Diagnosis _____

Check	Graph	Corresponding Clinical Condition	Sedimentation Index	Sedimentation Index
	Horizontal Line	Normal or Absolute Quiescence		
	Diagonal Line	Quiescence		
	Diagonal Curve	Slightly to Moderately Active	5 M.M.	60 Min.
	Vertical Curve	Moderately to Markedly Active		

[illegible]

EXPLANATORY NOTES:
Sedimentation Index. Represents the total sedimentation of red blood cells at the end of 60 minutes expressed in millimeters. Normal index for men varies from 2 to 8 millimeters, with an average of 3 to 4; for healthy women from 2 to 10 with an average of 5 to 6.
Sedimentation Time. Represents the time required for the "complete" settling of the red blood cells. Normal time always a question of hours. Of clinical value when reduced to 60 minutes or less.
Horizontal Line. A straight line with a sedimentation index falling within normal limits. It alone represents normal. The other graphs are always abnormal findings.
Diagonal Line. A straight line with a sedimentation index beyond normal limits.
Diagonal Curve. A curve of gradual descent with a sedimentation index beyond normal limits and a sedimentation time of 35 to 60 minutes.
Vertical Curve. A curve of sharp descent with a sedimentation index beyond normal limits and a sedimentation time of 20 minutes or less.

EKG REPORT - RAY

dated 4-16-65

Mo. Prison Hospital-D^R. Maxey

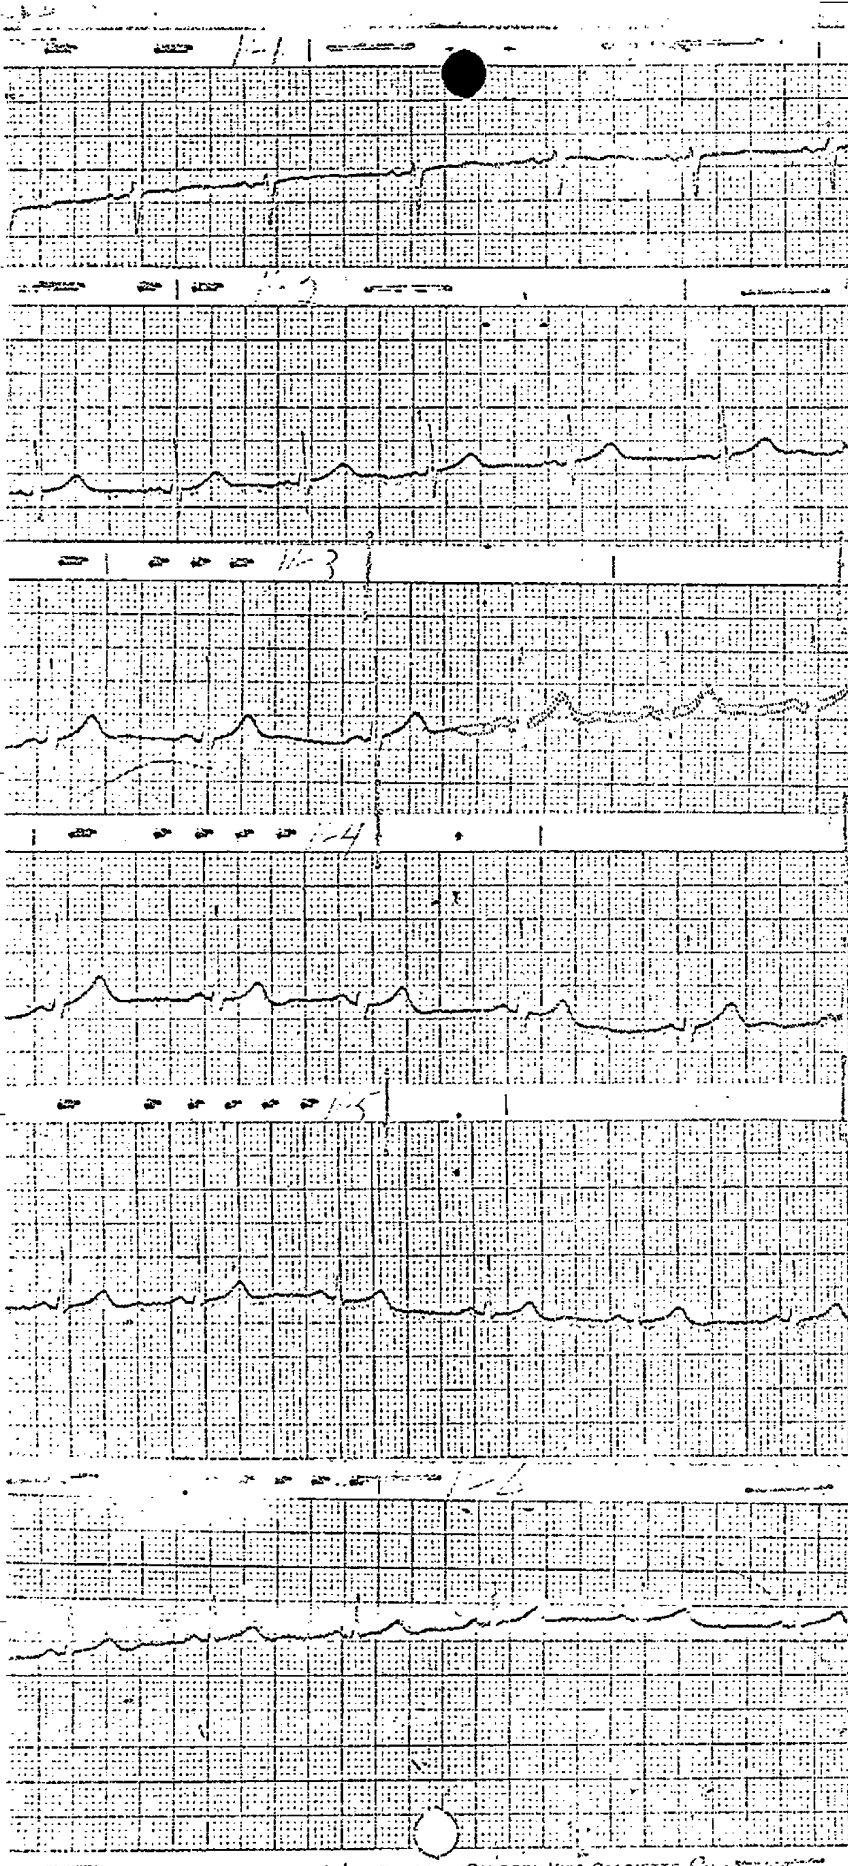

Mechanism	Sinus rhythm
Rate	69
PR Interval	0.14 second
QRS Duration	0.08 second
Axis Deviation	None

Lead I P Waves upright; QRS Complexes upright; T Waves upright.
Lead II P Waves upright; QRS Complexes upright; T Waves upright.
Lead III P Waves upright; QRS Complexes inverted; T Waves upright.
AVR P Waves inverted; QRS Complexes inverted; T Waves inverted.
AVL P Waves inverted; QRS Complexes upright; T Waves isoelectric.
AVF P Waves upright; QRS Complexes upright; T Waves upright.

The unipolar precordial leads reveal normal progression of the R Waves across the precordium. There are no significant ST segment or T Wave abnormalities.

Conclusion: Tracing within normal limits.

DEAR SIR;

I AM STILL HAVING THE TROUBLE I TALKED TO YOU ABOUT A COUPLE MONTHS AGO ABOUT IN VIEW OF THE FACT THAT I HAVEN'T IMPROVED AND AS I THINK YOU TOLD ME THEY DON'T HAVE THE FACILITIES HERE TO DIAGNOSIS OR TREAT THE PROBLEM, I WOULD LIKE TO REQUEST THAT I BE SENT TO THE STATE HOSPITAL AT ELLINGTON FOR EXAMINATION SINCE I THINK THIS IS ALSO BEGINNING TO EFFECT MY PHYSICAL HEALTH. SINCE I TALKED TO YOU, ALL THIS BECAUSE MY BLOOD COUNT WAS WAY BELOW NORMAL AND I HAVE CONSTANT HEADACHES. I WOULD APPRECIATE IT IF YOU WOULD LET ME KNOW IF YOU HAVE THE AUTHORITY TO DO THIS OR IF THE COURT'S HELD TO.

THANKS

Dr. Embree:3/23James Ray

Talked to you about this while you were in C.B. at 2:30 today.

This is for your info.

3/29/66 Dr. Embree called at 2:05. Ray had written to him along the above lines.

Department of Corrections
INTER-OFFICE COMMUNICATION

To: Leo M. Baker, D.O.
Chief Medical Officer

From: Lerby H. Rook, M.S.
Clinical Psychologist II

Subject: Ray, James - W/00416

Date: October 21, 1966

A day or two ago the Institutional Parole Officer asked me something concerning James Earl Ray's psychiatric file. I reviewed it and noticed that the man was sent to State Hospital No. 1 on September 8, 1966 by order of the Circuit Court, Cole County. The basis of this transfer is, of course, unknown to me. I have a letter from Ray dated March 22, 1966 which he wrote from C-Unit of Maximum Security. On March 23rd my notes indicate that I referred it to Dr. Enloe and on March 29th Dr. Enloe called me in the afternoon to state that Ray had written the Warden concerning his alleged illness. On November 1, 1965 Mr. Bergin had referred the man to me from Sick Call in connection with an alleged weight loss which I was unable to document satisfactorily by searching the records.

In November of '65 the man was tested and interviewed extensively from Monday through Thursday, November 1st through 4th inclusive, for periods of thirty minutes to an hour and a half. My notes indicate that I considered him "escape-prone."

I have in my file a typewritten copy of a piece of literature which is sent out by Roche in their packages of Librium. It is two full pages of single-spaced typewritten material quoting in detail the material of the sort one finds in the PDR. He had pulled this piece of paper out of his pocket while seated in my office about 9:00 on November 1st. I sequestered same.

According to all the test results I have on the man he is nothing more nor less than a severe neurotic apparently seeking to repress out of awareness, or to keep concealed, something he seems to be afraid someone else is going to find out.

The import of this IOO at this time is to urge you to communicate with the Warden that this man might well be considered "escape-prone" -- a runner (psychologically, anyway) -- and suggest that the Warden, in accordance with a "gentlemen's agreement" we have with the Hospital authorities, notify the Hospital authorities that this man should be considered as an escape-prone neurotic type individual, according to our information on him.

It is to be considered in this, however, that the escape-proneness may have been merely his intense wish to get out of the prison setting and it may be that he now finds himself in a more comfortable situation such that he is no longer an escape-prone person; or, in other language, a security risk.

Page

You will note that a copy of this is being sent to AWC Korn.

Lobby H. Rook, M.S.
Clinical Psychologist II

P.S.: My work with Ray would indicate that diagnostically I would be inclined to consider him as a Psychoneurotic disorder, anxiety reaction. This is a situation in which the anxiety is diffuse and it is not cathected to any object. Nor is it controlled by any specific psychologic defense mechanism. These reactions are characterized by anxious expectation and frequently associated with somatic symptomatology. Which is exactly what we find in Ray. In April of '65 he was on H-2 for chest and cardiac evaluation. EKG's were normal. Pressures were 110/80, pulse 76 on the 14th; 122/92, pulse 80, on the 16th. In early May CBC's and blood sugars were done; results: negative. On May the 24th-5th-6th he was again examined for an alleged "swelling under both arms." It was noted that his pulse went down markedly immediately after he had been admitted to patient status. On May the 29th at 2:00 a.m. he had a pulse of 140, respiration 32, BP 120/98. At 4:25 a.m. pulse was 130, 94/70, "showing shortness of breath," was given oxygen. By 4:55 a.m., pulse 84, pressure 118/80. He was diagnosed at that time as having paroxysmal tachycardia. Thus, we see the somatization of anxiety.
