Re: Sirhan B. Sirhan
November 6, 1967

DISCUSSION (continued)

He had some lacerations of his face and he does have some scarring on the under surface of the chin on the right and a tight scar in this area. There is also some healed abrasions scars over the right posterior lumbar area and lateral lumbar area.

He has complaints referred to the back consisting of pain. He finds that he has pain when he gets in a partially bent position for any period of time. He finds that he cannot tolerate remaining in this position. He also finds that if he stands or sits for a prolonged period of time he has back pain. When he bends or tries to lift he has back pain.

He does not have any leg complaints but on this date he seems to have some hypesthesia to pin prick over the anterior lateral aspect of both thighs. The significance of this is not fully determined.

It is possible that he could have some contusion of the anterior femoral nerves in the fall.

The factors of disability are:

1. The subjective complaints, slight to moderate with moderate for being in the partially and squatting positions for any prolonged period of time.
2. Scarring and disfigurement.
3. Hypesthesional.

Re: Sirhan B. Sirhan
November 6, 1967

DISCUSSION (continued)

I do not feel qualified to comment with regard to his eye.

For all practical purposes his condition can be considered to be permanent and stationary.

Sincerely yours,

Leonard J. Yamshon, M. D.

Re: Your Claim No. 02X-203445
Sirhan Sirhan vs. Atrillisch Construction Co.
Date of Injury: 9-25-66

Gentlemen:

This will confirm our telephone conversation on the afternoon of October 24, with Mr. Robbins at which time we advised him of the service by applicant's attorney of the report of a doctor in the field of eye, Maurice W. Nugent, dated October 10, 1967, that contains the concluding opinions that applicant has no permanent disability with regard to his eye. As a consequence, the examination scheduled with Dr. Kiehn should be canceled forthwith.

We attach a copy of Dr. Nugent's report for your file.

There may be need of an orthopedic evaluation but for the moment, we suggest you hold off any further examinations. The case is off calendar and we anticipate that we will be served with further medical reports by the attorneys for applicant. At that time, we shall submit our appropriate recommendations.

Yours very truly,

MCLAUGHLIN, EVANS, DALBEY & CUMMING.

Re: Sirhan S. Sirhan, vs.,
Suzanne Vistal del Rio
Case No.: 67 LA 312 144

Dear Sirs:

On October 10, 1967 I examined the above named and the following is my ophthalmological consultation report.

This ophthalmological examination was done at your request and with permission of the above named.

Please be informed that I have at hand a copy of his medical file and this was perused prior to the ophthalmological examination and again following.

This very pleasant and cooperative young man gave me no significant general history, past history or family history.

His present history states that he has never had glasses and that the accident in question resulted from being thrown from a horse September 25, 1966 at Corona. He thinks he was thrown into a fence, but it was during a fog and he and others were not certain of what he hit. In any event, he stated that he was unconscious for a short time and he awoke to find he was in the Corona Community Hospital. He stated that he came to while they were suturing his facial laceration.

Mr. Sirhan stated he was in hospital over night only and released him then one week later returned to the doctor for removal of stitches. He stated that he was back to work two weeks later and then noted poor movement in the left eye with a feeling of tension and pain.

-2-: 10-10-67
Palmer & Toomer
Attorneys at Law

Re: Sirhan S. Sirhan

he apparently feels that these symptoms are still present. He did not mention any twitching of the lid area or the left eye, although it is mentioned in his medical file.

Examination:

Mr. Sirhan was very cooperative and very pleasant. His symptoms were somewhat vague and variable, but pleasant cooperation was established and he proceeded with his examination with full cooperation.

His vision without glasses was a better than normal 20/15 in each eye.

A refraction was done and a most minimal refractive error was found, namely a +0.25 cylinder in the right eye at 105 axis and a +0.25 cylinder at axis 60 in the left eye. Needless to say this insignificant refractive error is of no consequence and it is essentially bilaterally symmetrical.

The intraocular pressure was measured and it was found to be a normal 17 millimeters of Mercury in each eye.

The ocular muscle balance was measured and found to be completely negative in every detail.

The excursions were checked and the eyes were found to be fully mobile in all cardinal positions of gaze and no paresis or paralysis were present whatsoever.

There was excellent convergence.

The media and fundi were studied and measured with a retinoscope, an ophthalmoscope and a biomicroscope and both eyes were found to be excellent in every detail.

The pupils were round and equal and responded normally to light and accommodation.

His near point without any correction whatsoever was a full normal Jac. or I in each eye and this is as it should be in this age group.

The lids and adnexae were all inspected and examined carefully and a scar under the left brow and in the area towards the nose of the left upper eyelid showed a very small scar remnant and one that has healed exceptionally well.

-3-: 10-10-67
Palmer & Toomer
Attorneys at Law

Re: Sirhan, B. Sirhan

This scar at the nasal end of the left upper eyelid is the result of his laceration and the surgical procedure of repair. It has healed well and has no tender spots in it, but in this location it is quite customary to have a small amount of deep scar tissue beneath the skin, but this is always left alone and no attempt is made to improve on the circumstance.

I did not ask for new x-rays as his file shows that those have been taken and there were no findings for any foreign body or bony fracture.

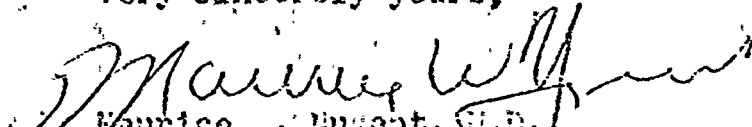

The fields were studied on the tangent screen and the right eye was fully normal both quantitatively and qualitatively with various sized test objects and at different distances from the screen. The left eye however at first gave a smaller field than normal, but when Mr. Sirhan was invited to make a good logical effort, he did so and the visual fields in the left eye also showed a full normal peripheral isopter and matched those of his right eye. The blind spots were normal and equal in each eye.

There was no complaint of twitching of the lids or areas about the left eye, nor was there any sign of any muscular twitching.

I can only state that this young man has a most excellent pair of eyes and a most excellent surgical result of the repair of his laceration at the nasal end of the left upper eyelid and there is no indication whatsoever of further treatment or complications or resultant disabilities.

In addition to the above, the eye examination shows no defect of the interior of each eye nor any localization of any central nervous system defect.

Very sincerely yours,

Maurice W. Nugent, M.D.

Re: SIRHAN, Sirhan B.
No: 02X 203445
Er: Altfillisch Constr. Co.
d/a: 9/25/66

Dear Sir:

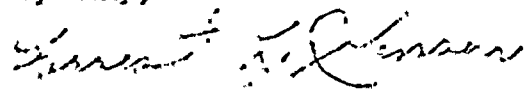

Mr. Sirhan Sirhan was seen again in my office on October 9, 1967. At this time he stated that he has not been working and that his symptoms are essentially the same. He states he has pain in his low back and a feeling of tightness around the left eye. He states that the sensation around the left eye seems to be increased with cold weather.

EXAMINATION: Pupils are equal and react to light. Fundusoscopic examination is within normal limits. Extra-ocular movements are intact. There is no nystagmus. Patient walks well on his heels and toes. Tendon reflexes are active and equal bilaterally throughout. I found no pathological toe signs. Patient reports tenderness on palpation over the upper sacrum. Back movements are carried through a normal range. Forward bending is accomplished to a point at which the fingertips touch the toes. Straight leg-raising is accomplished to 85 degrees bilaterally.

*

COMMENT: I find no evidence of any neurological problem. Relative to the back problem, I believe the patient's condition should be considered permanent and stationary, disability factors being subjective complaints of low back pain that I would assess as minimal in degree. The patient's eye problem should probably be evaluated by Dr. Klehn. No return appointment was made to see this patient. If I may be of any further help in his care, please let me know.

Yours very truly,

FORREST L. JOHNSON, M. D.

Case No. 67 LA 312-144
Your Claim No. 2X-292445 *wrong #*

Gentlemen:

The above-captioned case set for trial on October 2nd is being continued as the applicant's attorney has still not received his medical evidence and has been advised that he probably will not until the middle of October. So that all evidence will be available at the time of trial, we have agreed to this continuance to avoid the necessity of possibly two hearings.

Since the only issue is that of permanent disability, the delay is not prejudicial.

Very truly yours,

McLAUGHLIN, EVANS, DALBEY & CUMMING

Re: SIRHAN, Sirhan B.
No: 02X 203445
Er: Altfillisch Constr. Co.
d/a: 9/25/66

Dear Sir:

This is a report concerning Mr. Sirhan Sirhan, a 23-year-old, right-handed male seen in my office on September 5, 1967.

CHIEF COMPLAINT: Discomfort of chin, left eye and low back.

PRESENT ILLNESS: On September 25, 1966, while at work, the patient was thrown from a horse. The patient reports he was unconscious for an unknown period of time. He reports that he was taken to a hospital by ambulance and started regaining consciousness while his wounds were being stitched. The patient was hospitalized overnight. He states that they wanted him to stay longer but he did not like the idea. The patient returned to the doctor about a week later to have the sutures removed and was told that he should stay off work for ten to fourteen days. When the patient returned to work, he worked around the barn for about two weeks and then resumed his work as an exercise boy. He states that on resuming this work, he noted increased discomfort, particularly around the left eye and also low back discomfort. He was subsequently seen by the doctor who had originally treated him and then was referred to two other doctors. Because the patient had subsequently moved to his home in Pasadena, he was then referred to Dr. Kiehm in Pasadena. Sometime in November 1966, the patient was discharged from his job because he felt that he was unable to physically work the hours on the job that were required of him. The patient reports that he has not been working since his discharge from that employment.

The patient states he has noted no particular change in his symptoms in the last few months. He describes the left eye complaints as being waves of pain in the eye itself and a tight sensation in the skin around the left eye.

He reports a persistent pain under his chin and a feeling of tightness of the skin under his chin that interferes with his shaving. The patient reports that he has back pain all the time, but this is increased with bending movements or with lifting even minimal weights. Patient has noted no accentuation of back pain with coughing or sneezing. He reports no lower extremity pain.

PAST HISTORY: No operations. No previous hospitalizations. No serious illnesses. No other accidents or injuries. No allergens known.

PHYSICAL EXAMINATION: The patient is a small, thin male not in acute distress.

Blood Pressure: 120/70 RAS, 120/70 LAS.

Head: There is a small, well-healed scar near the inner canthus of the left eye and some slight prominence in the medial aspect of the left supraorbital ridge. The patient reports tenderness on palpation in this region of the supra-orbital ridge.

Neck: Supple.

Chest: Clear to percussion and auscultation.

Heart: Regular sinus rhythm. No murmurs heard.

Extremities: No gross deformities.

NEUROLOGICAL EXAMINATION:

Sensorium: Patient is alert, oriented and cooperative. *

Cranial Nerves:

- I Essence of peppermint perceived bilaterally.
- II Patient reports a general constriction of the left visual fields that is not consistent to the confrontation testing. The optic discs appeared normal bilaterally.
- III, IV, VI Extra-ocular movements were intact. I found no nystagmus.
- V Patient variably reported hyperesthesia over the right chin.
- VII Facial movements were unimpaired. Corneal reflex was present bilaterally.
- VIII Faint watch tick was heard bilaterally.
- IX, X Palate elevated in midline. There was no impairment of phonation or swallowing.
- XI No deficit noted.
- XII Tongue protruded in midline.

Sensory Examination: Pin wheel, cotton wisp and vibration were perceived throughout.

Motor Examination: No specific weakness was found.

Argonaut Insurance Company
6 September 1967 - Page 3

Re: SIRHAN, Sirhan B.

Cerebellar Examination: There is no nystagmus. There is no ataxia. Tandem walk is well performed.

Reflexes: Tendon and superficial reflexes were active and equal bilaterally. I found no pathological toe signs.

Back Examination: Patient reports tenderness on palpation over the lower three lumbar spines. There appears to be slight paraspinous muscle spasm in the lumbar region. Back movements were carried out through an essentially normal range, the patient reporting low back pain at the extremes of these movements. Forward bending is accomplished to a point at which the fingertips touch the toes. Straight leg raising is accomplished to 85 degrees bilaterally, the patient at this time reporting low back pain.

IMPRESSION AND COMMENT: The patient reports that he was unconscious at the time of his injury, although the medical reports that I had available for review did not verify this. At any rate, I found no evidence of a neurological problem at this time. The patient reports discomfort in the region of the facial scars. I believe there is a significant functional overlay that tends to magnify these complaints. The patient reportedly sustained a contusion of his back at the time of his injury and currently has complaints of pain in his low back. Arrangements were made for lumbar spine films, and I have asked the patient to return in about one month for re-examination. I believe the patient should be seen again by Dr. Kiehn for his re-evaluation relative to the scars and the complaints involving the left eye. I believe the patient is capable of returning to work as a stable boy at this time. *

Yours very truly,

FORREST L. JOHNSON, M. D.

Re: Sirhan Sirhan

Dear Mrs. Steiner:

In checking with Dr. Nelson in regards to sending you additional information on the above named patient, he tells me that we are unable to do so without the written consent by Mr. Sirhan. If you would send us his consent then we can send you the information you need provided we have it on hand.

Thank you,

1. The first part of the document is a list of names and dates, which appears to be a record of some kind. The names are written in a cursive script, and the dates are in a more formal, printed style. The list is organized into two columns, with names on the left and dates on the right. The names are: "John A. Smith", "John B. Smith", "John C. Smith", "John D. Smith", "John E. Smith", "John F. Smith", "John G. Smith", "John H. Smith", "John I. Smith", "John J. Smith", "John K. Smith", "John L. Smith", "John M. Smith", "John N. Smith", "John O. Smith", "John P. Smith", "John Q. Smith", "John R. Smith", "John S. Smith", "John T. Smith", "John U. Smith", "John V. Smith", "John W. Smith", "John X. Smith", "John Y. Smith", "John Z. Smith". The dates are: "1810", "1811", "1812", "1813", "1814", "1815", "1816", "1817", "1818", "1819", "1820", "1821", "1822", "1823", "1824", "1825", "1826", "1827", "1828", "1829", "1830", "1831", "1832", "1833", "1834", "1835", "1836", "1837", "1838", "1839", "1840", "1841", "1842", "1843", "1844", "1845", "1846", "1847", "1848", "1849", "1850", "1851", "1852", "1853", "1854", "1855", "1856", "1857", "1858", "1859", "1860", "1861", "1862", "1863", "1864", "1865", "1866", "1867", "1868", "1869", "1870", "1871", "1872", "1873", "1874", "1875", "1876", "1877", "1878", "1879", "1880", "1881", "1882", "1883", "1884", "1885", "1886", "1887", "1888", "1889", "1890", "1891", "1892", "1893", "1894", "1895", "1896", "1897", "1898", "1899", "1900".

Re: Sirhan Sirhan
Claim: 02X 203445
Our file: 67-1001

Dear Sirs:

At the request of the carrier the above named patient was examined by me on August 15, 1967.

PRESENT ILLNESS

The following is an account of an accident which occurred on September 25, 1966 at 8 A. M.

"The morning of the said date I was breeding a filly. In other words, I was asking her to run as far as she could. I was riding the horse. It was a very foggy morning that day. A few seconds after I had started the filly I was down. She threw me. I don't know how I fell, when, everything went blank. The people who were watching me couldn't see what happened due to the fog. I was taken by ambulance to the hospital, Corona Community Hospital. I was treated by Dr. Richard Nelson. He had applied some stitches to what he claimed was excessive bleeding. He applied about three to the lower side of my chin, and I don't know how many in the left eye. They took a series of x-rays, and at that time I was not fully conscious. I started to come to, when I felt the coldness of the platform or table they had put me on. I realized something was wrong with my eyes at the moment I started to come to. When he started to insert the stitching

Page 2
Sirhan
8/18/67

PRESENT ILLNESS cont'd:

needle in my eye and I more or less was mach against that. I didn't like the stitch to be put there. He insisted that it was necessary. I didn't know the gravity of the wound, but I thought it wasn't necessary to be stitched. I couldn't see myself, and he just told me it was necessary. He wanted to keep me in the hospital for a week, but I didn't like the idea. I did stay overnight."

As the history will indicate, the patient rambled a bit. I asked the patient what he knew about sand being in his eyes after the accident and this was his reply.

"Dr. Nelson- when he put the stitches in my eye I couldn't open the eye to see anybody due to the sand in my eye. I had to tell Dr. Nelson to remove the sand, but he told one of the nurses afterwards and she took care of that."

With regard to the subsequent treatment received, the patient was a little vague. Having reviewed the medical file, it was apparent that the patient had been treated for a short period of time and discharged by Dr. Nelson, and he then returned to Dr. Nelson with complaints, and the latter referred him to an eye, ear, nose and throat specialist, Dr. Paul Nilsson. When I asked the patient about this point, this is what he said.

"They were trying to arrange that date, appointment date, between Dr. Nelson and Dr. Nilsson, then we had to o.k. that through the office which took about two weeks or so. It was a matter of trying to get an agreement. Dr. Nelson apparently considered me discharged because when I went down to see him again he instructed his secretary to contact the company to reopen the account, and he did not act or treat me after that until he received the o.k. from the company."

The patient further stated:

" Dr. Nilsson didn't do anything. He just put some instrument in my ear and up my nose and gave me some pills which really didn't do a thing. He referred me to the specialist, Dr. Hilton

Page 3
Sirhan
8/18/67

PRESENT ILLNESS cont'd:

Miller. He again gave me tests and didn't do anything as far as treatment. I was under his care three or four visits. About a month later he said I should see Dr. Kiehn, because I told him I had moved from Corona and back to my original address.

First of all he (Dr. Kiehn) asked if there were any broken bones in this region. I told him I did not know. He ordered x-rays taken. He gave me a small tube of some lubricant and that was a sample type, and I used it, and it ran out within a week. It didn't seem to help much. He didn't say anything at all."

I also asked the patient about the recommendation of Dr. Kiehn that he be seen by a neurosurgeon named Dr. Robert Fiskin. The patient summarized this situation in the following way:

"That was a very abortive attempt by Dr. Kiehn. I waited three months after Dr. Kiehn told me. It hasn't come. I never saw the neurosurgeon. I never received the notice from the insurance company. He (Dr. Kiehn) hasn't discharged me, he said until I see the neurosurgeon, and as yet I have not seen him, so how can I go back to him."

With regard to the patient's present symptoms, he alleges the following:

"Very much facial discomfort. The eye I can't rotate it, too tight. I can't look in both directions as I used to, depending on the position of my head. I can't shift the gaze back and forth. I never did complain about the vision. I seem to fail the side vision."

The patient further indicated that there had been no improvement in his condition since his accident.

PAST HISTORY

The patient denied any history of a significant eye injury or disease prior to the above date of injury.

Page 4
Sirhan
8/18/67

PAST HISTORY cont'd:

According to the patient an unrestricted Motor Vehicle Operator's license was issued to him in 1965 in Pasadena, California.

FAMILY HISTORY

The patient denies any familial history of ocular disease.

REVIEW OF MEDICAL FILE

The following records were submitted for my review at the time of examination.

1. Doctor's First Report of Work Injury dated October 6, 1966, Richard A. Nelson, M. D.
2. Doctor's First Report of Work Injury, November 8, 1966, Richard A. Nelson, M. D.
3. Doctor's First Report of Work Injury, November 22, 1966, Paul Nilsson, M. D.
4. Doctor's First Report of Work Injury, April 3, 1967, E. Gordon Richm, M. D.
5. Letter to Argonaut Insurance Company, April 4, 1967, E. Gordon Richm, M. D.
6. Letter to Argonaut Insurance Company, October 26, 1966, Richard A. Nelson, M. D.

The initial report of Dr. Richard A. Nelson indicates that the injury was limited to a small laceration of the left upper eyelid. In addition there was sand in both eyes. Subsequent evaluation by Dr. Nilsson confirmed these findings and failed to demonstrate the presence of any significant ocular injury.

Page 5
Sirhan
8/18/67

REVIEW OF MEDICAL FILE cont'd:

The report of Dr. Kiehn is in general negative, however, he comments on an "inconstant" constriction of the visual field and in addition refers to a fibrotic band in the left upper eyelid which he feels maybe the cause of the patient's ill defined symptoms. He further intimates that this condition might require surgery.

There are no other ophthalmological reports of significance in the file.

EXAMINATION

| | | | | |
|--------|-------|-------|-----|-------------|
| Vision | 20/20 | Hear: | J-2 | (Right eye) |
| | 20/20 | | J-2 | (Left eye) |

External Structures: There is no apparent scarring of either eyelid. The ocular adnexae and globes are grossly negative.

Extra Ocular Muscles: Grossly intact. No diplopia demonstrated.

Pupils: Round, regular and equal with normal reactions.

Tactile Tensions: Both eyes: Not elevated.

Fundi: The pupils were dilated; the fundi were studied with both direct and indirect ophthalmoscopy. They were found to be consistent with the stated age (23)

Slit Lamp: Cornea, anterior chamber, lens, and anterior vitreous not remarkable.

Refraction: No significant refractive error demonstrated.

Visual Field Screening: The visual fields of this patient were investigated using four different methods. Initially, the patient was checked with the visual field screening device which indicated the right eye was normal and the left eye had some peripheral constriction.

Page 6
Sirhan
8/13/67

EXAMINATION cont'd:

Visual Field Screening cont'd:

The examination was then repeated at the tangent screen using both the 4/1000 and 2/1000 white targets. This demonstrated marked constriction of both visual fields, but more so in the left eye than in the right. It should be noted that the amount of constriction with the two different targets was not proportional to the size of the target used. The examination was then concluded using the standard perimeter. This test showed moderate constriction of the right field and marked constriction of the left field. When the various fields are compared, it is obvious that the results are highly inconsistent and in no way could be related to any organic process involving either the eyes or the intra-cranial visual pathways.

Stereopsis: Patient has normal binocular function.

DIAGNOSIS

Essentially normal eye examination.

COMMENTS

Based on my examination, the history obtained, and the medical records presently available, I do not believe that this patient sustained any permanent disability as a result of the accident of September 25, 1966.

The injury to the left upper eyelid referred to in other medical examination is not demonstrable at the present time, and I strongly advise against any attempt to resort to surgical intervention. This patient, in my opinion, has the right combination of factors to warrant extreme conservatism in utilizing any therapy of this nature. Namely he has ~~no symptoms~~

Page 7
Sirhan
8/18/67

which are not organic in origin, and in addition has no proof whatsoever that any foreign material is retained in the left orbital area.

With regards to the symptoms alleged by this patient, there is nothing whatsoever in the patient's examination to substantiate a claim of an organic injury. As noted above, nearly all the subjective tests of visual function have clearly demonstrated a pattern of inconsistency which negates the possibility of any injury to the eyes or the intra-cranial visual pathways.

CONCLUSIONS

As a result of the above reported injury this patient did not sustain a permanent disability involving his eyes. No further medical treatment is indicated as the patient's condition is not industrially related.

I wish to thank you for this referral; should there be any unanswered questions regarding this case, please do not hesitate to call on me.

Very truly yours,

Albert Tashma, M. D.

RE: Sirhan Sirhan v. Granja Vista Del Rio
2X-203445
D/A: September 25, 1966

Gentlemen:

We have reviewed the above case referred to our office on July 20, 1967. We note the application lists the employer as Granja Vista Del Rio whereas the employer's report refers to Altfillisch Construction Company. You have indicated you insured this particular construction company but did you also insure Granja Vista Del Rio?

If you do in fact cover this entity, then we recommend you immediately send a letter to the applicant advising him that all medical treatment is authorized by either Dr. Gardner or Dr. Weaver, or whenever you intend to use for this purpose. You should also advise him that any other medical treatment will be on a self-procured basis.

The application requests temporary disability indemnity but alleges only various periods of disability without specifying. We suggest you secure a report from applicant's superior as to whether or not he performed his regular duties after September 25, 1966, that is, if he continued to work for them.

If you wish to set up another examination with Dr. Garner, we can undoubtedly secure the applicant's attorney's cooperation in compelling his client to attend.

Very truly yours,

McLAUGHLIN, EVANS, DALBEY & CUMMING

Corona, California

Claim No.: OEL 203445
Claimant: Sirhan Sirhan
Date of Injury: 9/25/66

Gentlemen:

As you know, Mr. Sirhan has filed an application with the Workmen's Compensation Appeals Board, contending that as a result of his employment with your company, he sustained an injury to his left eye and lower back on 9/25/66.

In order for us to be able to defend your company in an adequate manner, there is certain information that we must request of you and ask that you submit same to us as soon as possible.

We would appreciate your submitting to us a complete employment record as to when Mr. Sirhan was hired, when he was terminated, if terminated, the reason for his leaving your company, the amount of wages he received in the period of time he was employed by your company, and what periods of time he worked for you subsequent to his injury of 9/25/66, and if you have any knowledge of a previous injury to his lower back or left eye.

In anticipation of an early reply, we thank you for your fine cooperation in the handling of this matter.

Very truly yours,

R. J. Robbins
