PROJECT SUN STREAK (U)

ERV SESSION PROCEDURES REPORT

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

---

CONTROL NUMBER: 8609	NICKNAME:
DATE OF SESSION: 13,19,25 Nov 86	TARGET COUNTRY: Unknown
REFERENCES: None	SESSION NUMBER: 01,02,03
DATE OF REPORT: 26 Nov 86	MISSION STATUS: Initial (Continuing)
TECHNIQUE UTILIZED: ERV	SOURCE IDENTIFIER: 101

---

1. ( ) TASKING: Prior to the first session, the Interviewer was provided with a sheet of bond paper on which the following handwritten note had been prepared: "TASK: Describe the technical facility located vic: ██████████ Personnel, activity, purpose, equipment, external configuration". Prior to the initial session Source was provided only the encrypted coordinates listed above, as per Extended Remote Viewing (ERV) protocols, and told that this was a new target for him. In the subsequent sessions, (included in this report), Source was provided a brief review of the key elements provided by him during the previous session, e.g., "a large open area with a low, hard structure leading to an underground facility". Source was also provided the same encrypted coordinates as the previous sessions. No other cuing or descriptive data except as stated above was provided to the Source pertaining to this site.

SG1A

2. ( ) SESSION: There were no unusual occurrences, inclemencies or external environmental conditions known to the Interviewer which may have influenced the results of any of the sessions included in this report. Each session was conducted utilizing standard ERV protocols.

3. ( ) SUMMARY:

a. ( ) Following each of the three sessions described in this report, Source prepared a post-session written summary of his impressions. Due to the multiple targetting procedures, much of the information in these post-session summaries was redundant or not relevant to the ultimate target. To facilitate analysis of Source's perceptions as described during and in post-session interviews, the major gestalts have been summarized, with explanatory Interviewer notes, when appropriate.

This document is made available through the declassification efforts  
and research of John Greenewald, Jr., creator of:

# The Black Vault

The Black Vault is the largest online Freedom of Information Act (FOIA) document clearinghouse in the world. The research efforts here are responsible for the declassification of hundreds of thousands of pages released by the U.S. Government & Military.

(1) ( ) The site is located in a fenced in area which has been cleared of all brush and trees. The surrounding area consists of rolling terrain with good soil and adequate water for good agricultural growth. In the distance, actual measured distance undetermined there are two areas of human concentration. One of the areas is described as a small village and the other is a large town or small city. Both lie on the banks of a river which may be the same river in both cases. The air is crisp and cold but as yet there does not appear to be any snow on the ground and the trees still bear some of their green coloring.

(2) ( ) Located at an undetermined distance from this site is another object described as resting on a tall, open construction tower. This structure reminds one of a Forest Ranger's lookout tower however, the top portion seems to be made of some reflective material and the interior contains some sort of sophisticated electronic equipment. Men in heavy cold weather clothing are observed working around this tower but appear to have little to do with its operation. Another structure associated with this tower, (actual relevant position undetermined), is described as being cylindrical or bowl shaped with cables leading from it to an unknown site. The purpose of these two structures, which may or may not be directly related to one another, is to transmit and receive data from the actual target site.

(3) ( ) Inside the fenced area of the target site, there are several different types of structures. One structure is described as a low, rectangular building with a sloping roof. This building seems to be out of place or incongruent with the overall impressions of the site. The sloping roof may in fact be a cover capable of opening up in some manner. Another structure, described as a low, wide cylindrical shape may be located near the low square building (structure). There is an impression of all weather roads and some well worn car trails in the area and possibly a railroad track near the compound.

(4) ( ) Source further described a "mound like" structure, set low to the ground with the lip of the mound overhanging the circular base much like a very low fat stemmed mushroom. At one side there is an impression of a sloping away from the mound like a ramp or angular attachment leading from the top of the mound to the ground surface. The mound has a subterranean aspect with a central core or shaft leading down to "cavernous" sized rooms below ground. There may also be a guarded, reinforced and camouflaged aspect to this structure. The large rooms appear to surround the central shaft. These rooms serve various functions, all related to the overall mission of the site. Some areas are utilized for housekeeping and administration, monitoring/tracking/adjusting (all one concept) and facilities for "tracking and plotting relative positions". The entire area is artificially lit and possibly has an artificial atmosphere (environment). Although much of this facility is older construction, some of the areas are being renovated and remodeled to accommodate the introduction of state of the art electronics.

Much of the area appears to have electronic cables lying about, banks of computer like equipment against walls, and people working at terminals (reminiscent of an Air Traffic Controller station). There are people at the stations, people roving about as first line supervisors/advisors and another line of supervisory personnel available to handle situations which might arise. The overall impression is that the machines serve a far more important function than the people who work here.

(5) ( ) A cut-away profile of this facility might resemble a crystal wine decanter with a broad wide base sloping up to a long slender neck (the central shaft). There is a feeling that much of the facility is used to store items in warehouse type configurations. Source described a strange eerie feeling associated with the site. At one point, Source paused momentarily and stated simply, "they know I am here, I can't really explain how but they know I'm here", which may have accounted for his feeling of anxiety. Within the structure there are many strange shaped objects in various locations. One object is described a large "L" shaped object, metallic feeling consisting of many identical "L" shaped object laminated or fused together side by side to form one wide "L" shaped object similar to a bench or chair. There is a general feeling of waiting, watching, caution and preparedness among the workers in this facility. A strong impression of the same feeling that one has when assembling a complicated toy model, everything must be slow and deliberate. There is a deep sense of purpose among the men who work at this facility. Many of the men who work here appear to wear a one piece, silvery jump-suit garment which may be some type of uniform.

(6) ( ) Another central object is described a oval or rounded in shape and very large. It appears to be metallic, with external wires and tubes (hoses/cables) leading to it. At the time this object was observed, it appeared to be suspended off the surface of the ground. The object is associated with a large data base resembling an "iron lung", whose functions is the collection of large amounts of data and utilizing this information in support of this operation. The facility is a critical installation but is possibly only one of several such installations inter-connected or linked to one another.

b. ( ) Many of the post-session sketches drawn by Source corresponded closely with his stated and written descriptions of the site. In some cases there were curious additions like hallways or chambers leading off the main chamber which Source drew but could not explain. Additionally, Source continued to describe the feeling that his presence was known to those who worked here and that they were not upset by his intrusion. At one point Source was requested to enter a side chamber (other room) and could not do so for reasons unknown to him. This anomaly will be examined in future sessions pertaining to this target.

4. ( ) FEEDBACK: Source has not been provided any

feedback concerning the target since such feedback would be inappropriate at this time. Additionally, it should be re-stated that the Interviewer is not cognizant of the actual target and therefore feedback from the Interviewer would be impossible at this time. The Operation's Officer has indicated to the Interviewer that the information provided to date indicates that Source has successfully acquired the proper target however, to date Source has not provided any definitive data pertaining to the site, its mission, personnel or its general functions. At the direction of the Operation's Officer, these area's will be pursued in future sessions.
