Monitor

All activity associated with Mde. C was underground in nature. Purpose of above ground facility was simply an entrance.

First impression was doorway to a prison-like device. Smooth, cold, solid, ~~sharp~~ sharp edged with radiating bands of colored light.

A collar-like device over their perimeter. Round, narrow, concave and reflective. This "collar" had side supports.

The object in the Mde. identified as "C" was in the process of being assembled. Workers in bright yellow clothing with dark reflective vests and gloves. Adv like someone using a flash bubble.

There was an impression of a person, bearded, who was overseeing the work. Received a large drawing (schematic) of object on work table. The object is put together in parts, not one piece construction. It can be rotated from side to side and in a circular motion.

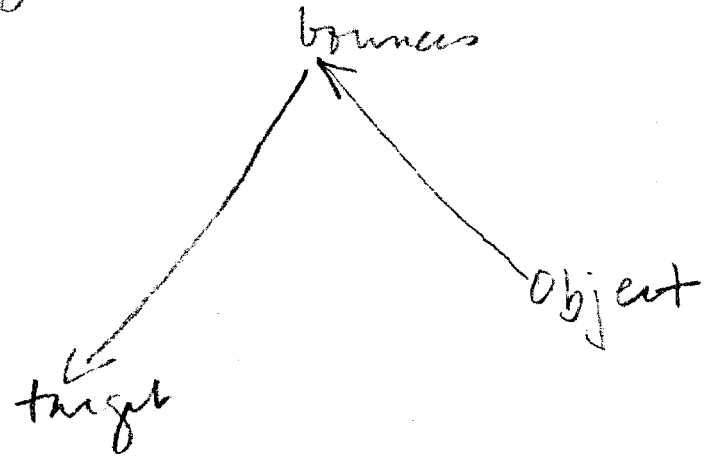

When completed, it sits on a platform that can be raised and lowered. Location does not change, i.e., built one place and moved to another.

Impression of a person sitting in a glassed in room with a monitor & console. Monitor is used to track like in a control tower. Console contains programming and firing of device.

molecular in structure possibly crystalline.

to this, immediate, undetectable and  
has a pinpoint accuracy like a laser.

reflective quality.

Can be used in straight lines.
