MEMORANDUM FOR ASSISTANT DEPUTY DIRECTOR FOR SCIENTIFIC AND
TECHNICAL INTELLIGENCE

SUBJECT: Operational Report - Project 8702 (U)

1. (S/SK/WNINTEL) Source 101 originally described the target building as a rectangular, ten-story building constructed among two other tall buildings in an area where construction efforts remain continuing. Openings on top of the building were observed. The structure had a sloping down effect and seemed designed to accommodate a hard, central, core (not further defined). Date of completion for the construction was estimated at two or three years from date.
2. (S/SK/WNINTEL) Source 018 described the target building as one of several large buildings in various stages of completion. A large open area inside the building, along with the presence of a persistent bluish light, seemed important.
3. (S/SK/WNINTEL) Source 003 identified the target building as a tall, rectangular, flat-topped, structure made of masonry concrete. Windows were located at the top of the building, but no windows were observed close to the ground. There was a large, open area that seemed to dominate the structure. The building appeared to be associated with the impression of "aerospace".
4. (S/SK/WNINTEL) Source 021 reported the target building as a huge structure located among a cluster of buildings situated in a barren, isolated area. The presence of a building shaped like the letter "H" was also observed in the area. People with bright yellow visors and wearing protective clothing worked in the target building shaped like a huge airplane hangar with a domed roof. Small frosted windows were also observed at the top

WARNING NOTICE: SENSITIVE
INTELLIGENCE SOURCES AND
METHODS INVOLVED

of the building. A dish antenna capable of vertical and horizontal movements was controlled by a console located in a room within the target building; an intense blue light was associated with the antenna. There were indications of a command and control activity with (electronic) consoles providing overhead pictures. The area had the flavor of a nuclear launching site.

5. S/SK/WNINTEL) Project 8702 was the result of 12 sessions conducted by four sources. Source 021 appeared to have the best target acquisition in addressing the issue of specific interest. A copy of an Intelligence Evaluation Sheet is attached for completion at your earliest convenience.
