|                |
|Source Identifier: 003   |

```

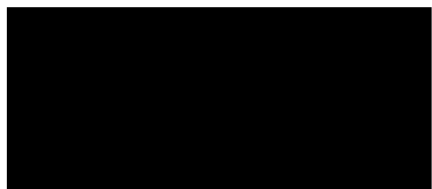

1. (S/NF/SK) Tasking: See tasking data sheet, attached. No further instructions received.

2. (S/NF/SK) Session: A good deal of session time was spent discussing source PI's (psychological, not physical). Nevertheless, session felt copacetic to monitor; rapid target acquisition combined with many indicators. Source suspected possible AOL with regard to the idea of SDI, but said that it did felt like signal line. Source produced the word "unfinished" early in S4 and was instructed to turn his attention in that direction because he was probably on the target.

3. (S/NF/SK) Summary: AI of "fascinating". A "technical" structure under construction in a remote area with green hills and water. [It is huge, airy, flat, tapered, rounded with a platform, (perhaps for landing helicopters).]? (See source sketch in session notes). Installation involves complex electrical/electronic systems, as well as a "core". Source perceives this site to be "the answer to SDI". See session notes for amplifying data.

4. (S/NF/SK) Feedback: Source was informed that he was probably on target but that the monitor would require additional instructions in order to proceed.

Core
Central

obv

2 meanings

→ 4 1/2 Core = central self-contained part of family - Absolutly essential for functioning. Could function with other component missing but not this.

"They" are working on the Core.

Nuclear Core? Impression that core also refers to dedicated power source, probably nuclear

Als/5 1/2 Impression of whole structure ^{Flickering} being "lit up" with radiant energy + Airblowing; pulsing both ^{emanating} ^{receiving} ^{pulsing} ^{lit up}
Idea of space attack in hostile mode

✓ feelings not necessarily visual

How BK particle view etc.

like its under attack and attacking back! ~~not~~ necessarily with some "thing/method"

Site ^{under construction in a remote} area with vegetation + water nearby. Structure is huge, very flat, tapered, rounded with a platform involved - perhaps for landing helicopters. Construction is unmanned or unfinished - material - mainly metal are being up to work on structure both above + below platform. Complex electronic + electrical systems must be in place before rest of work can be completed. Structure involves weapon syst. control, with a shielded concept. Impression of connection response to SDI - words is perceived as offensive. Large loads of radiant pulsing energy both being sent and received + defended against seems an important concept of the site. Site is vertically oriented primarily in a non-physical sense, and is designed to operate in wide scope over immense distances.
