(Tasking data sheet attached)

Summary:

Structure/structures/land interface. The key structure is a very big, multi-storied, boxy building with clean lines; few if any windows. There are support buildings present. A city or large town is nearby [REDACTED]. The building's main entrance is connected to a covered passageway which protrudes or extends outward from it. There are exposed pipes hanging from the ceiling of a lower floor.

SG1A

Workers (there are many) are transported to an area near the key structure (AOL-bus stop). Many disparate projects are worked on within the building; an overall "applied R&D" feel is present

SG1A

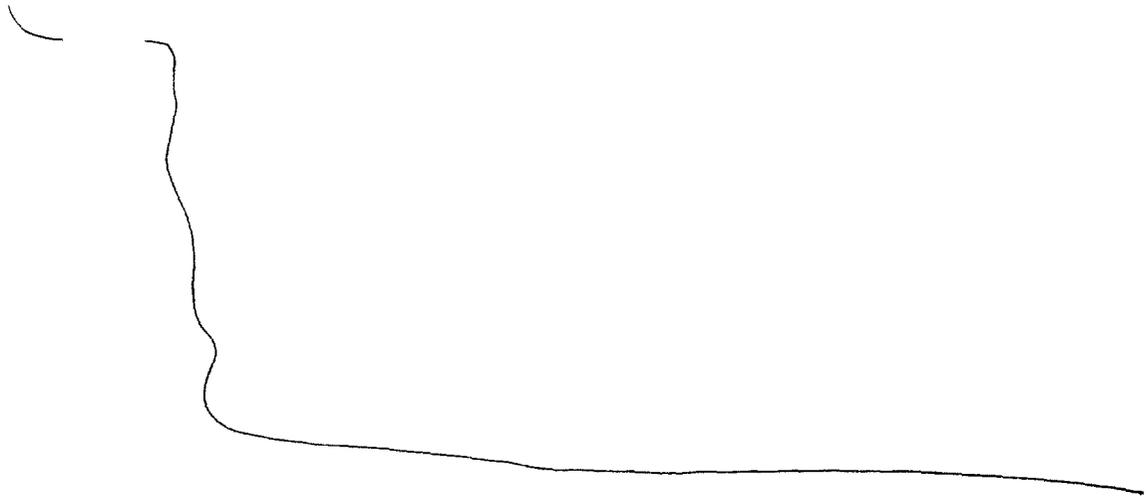

[Note: Stopped session for feedback and further cueing from project manager. Would like to use subsequent sessions for a systematic exploration of activity within the key structure, from the bottom floor to the top.]
