Summary of Information

X
Site involves a very large structure with a sense of being both inside and outside. There is an airiness about it, and there seem to be major structural elements that involve lattice-like scaffolding or structural bracing with a framework of girders. Outside the structure, one is presented with an impression of sheer, towering walls far overhead, which however may be easily entered or walked under through passages in their base. Light colors, beiges and greys predominate, but occasional bright or pronounced colors, especially reds and blacks are present. Though it is virtually empty now, large numbers of people have in the past, and may in the future continue to congregate here. On those occasions, the noise level is very loud, with a great deal of yelling and shouting. There is a sense of festivity, or light-heartedness, or entertainment of some sort. Outside, there is a wide, flat, seemingly paved-over area suggestive of a huge parking area. Associated with the site are suggestions of many repetitious stair-step sorts of arrangements.
