

WORKING PAPER

Project: 900111 (W-16)
Date: 11 JAN 90
Time: 0751-0848
Viewer: 018
Session: 01

SUMMARY OF INFORMATION:

1. Describe the target site: The site is an area in hilly or mountainous country. Access to the site (at least from one direction) is by a long, winding natural (dirt or gravel) road which goes through rural country. The site, itself, is a group of several buildings. These are of small to medium size and have a "rustic" ambience about them.

One of the buildings has a work area inside which is kept very clean.

It has shelves on which there are rows of glass bottles with "specimens" or "samples" in them. There are people in this building in lab coats.

Another building has a very large door, a dirt floor, and what appears to be a system of pipe railings inside, almost in the form of stalls or cattle pens. There are hose connections at several locations around the interior of this building.

At some other location within the site, there is a storage area for coils of wire, hoses, etc. One of these has hoses put neatly away in long folds (like is done on a firetruck).

At some unidentified location within the structure, there is a large cylinder of brown and black mottled stone with a polished surface.

One portion of the site's set of structures has a sawtooth appearance (see fig. 1).

At some other location of the site, there is a building with a large "blowout" appearance (see fig. 2).

2. Describe any activity at the target: Serious work goes on at the site, but it is also open for visitors to come by and tour the place. The people in lab coats each have their own small work areas which appear as islands of junky orderliness in an otherwise totally orderly work area.
