PROJECT SUN STREAK (U)

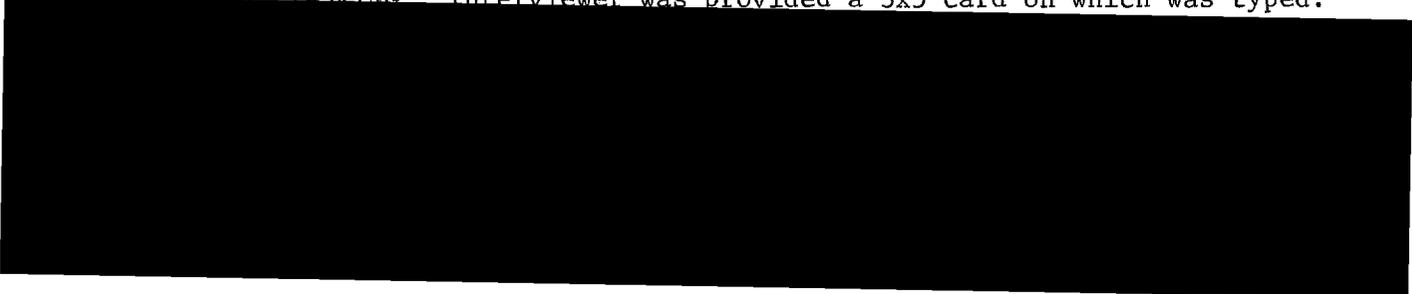

ERV SESSION PROCEDURES REPORT

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

CONTROL NUMBER: NICKNAME: OTHER "D"
DATE OF SESSION: 25 Jul 86 TARGET COUNTRY: UR
REFERENCES: NONE SESSION NUMBER: 01
DATE OF REPORT: 13 Aug 86 MISSION STATUS: (initial) - closed
TECHNIQUE UTILIZED: ERV SOURCE IDENTIFIER: 101

manuten 052

SG1A
1. () TASKING: Interviewer was provided a 3x5 card on which was typed:

2. () SESSION: There were no unusual occurrences, inclemencies or external environmental conditions known to the Interviewer which may have influenced the results of this session. The session was conducted utilizing only standard ERV protocols.

3. () (The following narrative contained within quotation marks is an abridged copy of Sources's post session written summary. This summary has been editorialized, (as indicated), by the undersigned for clarity, grammar and structure. The actual unabridged summary is maintained in the mission field dossier at this location along with any other material produced during this session, e.g., sketches, notes, etc).

"(The) site is in a pristine area, (with a) river nearby. (The) land slopes up towards (the) site. (The) site is like an inverted bowl (containing) ribs (support) like engineer posts. (The) site is underground. There are tunnels (leading to) a large hangar-like (open) area. The hangar-like area has (an) elevated portion (resembling) a rail dock or a (European) subway station. The station area is clean, bright (with predominant colors of) blues and whites. (The) building (structure) on the elevated platform contains numerous (electronic) consoles (which perform) various (functions) from life support to "coalating." (There) is not much activity (at the time of the viewing). (At a time when there is more activity) the area is (well) lit and there is a lot of movement. People are dressed in uniforms (similar to) US Air Force summer uniforms with dark trousers and a (lighter colored) short sleeve shirt.

This document is made available through the declassification efforts
and research of John Greenewald, Jr., creator of:

The Black Vault

The Black Vault is the largest online Freedom of Information Act (FOIA) document clearinghouse in the world. The research efforts here are responsible for the declassification of hundreds of thousands of pages released by the U.S. Government & Military.

(One) individual) is wearing a full uniform (with blouse) and named "Georg or George" and is probably an academy graduate. He (resembles) Black Jack Pershing. (A) failure (in this facility) will have political results (and could result) in the transfer of funds to (other) things proving more successful. (An impression of US North Atlantic Air Defense) NORAD in Cheyenne Mountain, (Colorado) was present."

b. () During the actual session, Source reported other data which may impact on the final assessment of this target. That data is listed below in raw unevaluated form:

(1) () An impression of water not far away. There is an isolated, lonely feel about this target but not, apparently, due to its geographic location but rather from its purpose.

(2) () An impression of an inverted bowl, like the (US) Capitol Dome except that this dome seems to be constructed below another building which lies over the dome.

(3) Within the dome, a feeling of guarded security, tenseness and alertness prevails. The impression persists that the Source does not belong at this target i.e., not authorized.

(4) () Tunnels connecting various areas within the facility (below the dome) in addition to long rows of steps leading down. At least one point tunnels intersect forming a "T" formation.

(5) () Within the complex there is a large open area, a central point in the structure, connected by the tunnels, steps and an impression of a subway system. There is a wide array of computer-like electronic equipment, storage cabinets, large viewing screens, switch boards, charts, flashing lights and a general feeling of excitement and anticipation among the people working here.

(6) () The facility seems to function on periodic alert status with an impression of tests and drills be conducted by "feeding" data to the machines. These drills are codenamed with two word codes. One code name began with the word "LUCIFER...." another began with "SIGNALS....". A separate data file was labelled "CHUX" (phonetic). The success of this facility will result in "maintaining an advantage" "leapfrogging" (as in checkers) and the prevention of "sneaking ahead." A failure would result in lost prestige, a shifting of political interest and loss of funding.

4. () OPS FEEDBACK: Immediately following this session a review of Source's perceptions was conducted with the operations officer. It was his determination that Source had:

a. () been completely successful in acquiring the proper site.

b. () identified all of the major getalts at this site.

c. () adequately identified the key components, facilities, equipment and purpose of this site.

d. () completed the mission in such a manner that further sessions would be unnecessary as a result of this highly successful "one-time" viewing. Source was provided with the entire mission package containing diagrams and descriptive data on the actual target, (an underground communications center to provide command, control and communications for wartime and emergency use). It is located within the
SG1A [REDACTED] Source examined the official drawing and diagrams and agreed that this was, in fact, the target he had viewed.
