- E. SESSION SUMMARY:

Site consisted of a wide, open, spacious area. Water is at the site. There are peaked objects to the back of the site. Green is at the site and this is associated with the natural environment.

There is an object at the site that moves at a very fast rate of speed which is generated by an individual(s).

There may be small white structures at the site.

*The object is  
opened at the top.*

- E. SESSION SUMMARY

The colors brown, green, blue, yellow/gold are associated with the site. I felt that I was outside in a natural environment. Water was associated with the site.

Site consists of small structures that look alike. Site consisted of a larger structure that had a roundness associated with it. The larger structure had an entrance to the side that was low to the ground.

Site reminded me of a work place or of people looking at something and taking it seriously.

Site also had small circular objects.

CPYRGHT

“I felt a little tremor,” David Livingstone admitted in 1855, as his canoe surged toward the thunder of the mile-wide falls he named for Britain’s Queen Victoria. A plane (above) now carries tourists above the torrent of the Zambezi River, where the explorer saw “a dense white cloud with two rainbows.” Pale moonlight recaptures one such rainbow in a haunting time exposure (right) that also records a star track.
